

A

$$n = \frac{V_a}{V_{ref}} 2^n$$

$$= \frac{4.17}{10} \times 2^3$$

$$= 3.336$$

So, count as a ~~float~~ integer value = 3

~~it is a float~~ So, binary output = 011

Given,

$$V_{ref} = 10V$$

$$V_a = 4.17V$$

$$\text{bit} = 3$$

$$R = 1k\Omega$$

$$C = 1\mu F$$

Ans:-

B

$$T_{\text{out}} = 2^n \times \text{counter period}$$

$$= 2^3 \times 1ms$$

$$= 8ms$$

$$V_{max} = \frac{V_a}{RC} \times T_i$$

$$= \frac{4.17}{1000 \times 10^{-6}} \times 8 \times 10^{-3}$$

$$= 33.36V$$

C maximum sampling rate is limited by the time required for worst case conversion.

$$t_1 = t_2 = 8 \text{ ms}$$

for worst case conversion duration =

$$t_1 + t_2 = 16 \text{ ms}$$

$$\text{max sampling rate} = f_s = \frac{1}{T}$$

$$= \frac{1}{T_1 + T_2}$$

$$= \frac{1}{16 \times 10^{-3}}$$

$$= 62.5 \text{ Hz}$$

$$T \times \frac{V}{255} = \text{value}$$

$$0.01 \times 8 \times \frac{5.12}{255}$$

$$33.33 \text{ V}$$
